PROJECT

Booksky

This application is built using HTML, CSS, and JavaScript, designed to offer users a seamless experience in managing their documents, books, stories, and more. This CRUD application streamlines the management process, making it an essential tool for your organizational needs.

BMI App

This application is designed using HTML, CSS, JavaScript, and React, enables users to effortlessly check their Body Mass Index (BMI) and provides a visual indication of their health status through color-coded results. (Green – Normal Weight, Yellow - Under Weight, Orange – Over Weight, Brown - Obese)

Weather App

This application is made using HTML, CSS, JavaScript, and React, providing users with real-time weather information for their selected cities. It displays key weather metrics such as humidity, latitude, and longitude. The data is sourced from the Open Weather API, ensuring accurate and up-to-date information.

Currency Converter

This application, developed using HTML, CSS, JavaScript, and React, allows users to convert between multiple currencies using real-time exchange rates. Supporting currencies from 10 countries, it delivers precise and current conversion information.
